ROLLERS & PROFILES

DUBLEX ROLLER METAL PROFILES

Metal profiles for various roll configurations.

- 1 meter length profiles

DUBLEX & SIMPLEX ROLLER ESSENTIAL OKARROLLS

Move, handle and use Okarroll rolls in your assembly, production or shipping line for example.

Sizes:

- 50mm (10kg max weight per duplex roller)
- 60mm (20kg max weight per duplex roller)
- 80mm (40kg max weight per duplex roller)

MTR 120 DUBLEX ROLLER HANDLE HEAVY WEIGHT

If you're handling massive, heavy objects the durable MTR 120 roller can handle weight up to about 200kg per MTR 120 Roller on duplex profile.

Sizes:

- 120mm (200kg max weight per duplexroller)

MTR 50 ESD ROLLER HANDLE ELECTRONICS

These special rollers are designed to use when handling electronics as they discharge static electricity charges.

Sizes:

- 50mm (10kg max weight per duplex roller)

MTR 60 PUR ROLLER FOR SENSITIVE HANDLING

When you need to handle objects that require special care the PUR rollers serve you best. Their soft material is ideal for handling glass, furniture and other objects that scratch or break easily.

Sizes:

- 60mm (20kg max weight per duplex roller)

FIAT CHRYSLER AUTOMOBILES

We make customized, high quality fittings and assemblylines for industrial use. We use Okarrolls typically in gravity conveyor lines, perfusion shelves, intersection stations, assembly and packaging points. Okarroll is a good alternative for ball transfer rolls. Multidirectional rolls enable versatile object handling moving without having to lift up the object.

In our client projects we use mostly 50mm and 60mm rolls. The roll material depends on the objects handled and we've used all of the different materials of Okarrolls from POM to ESD (for electronics) and PUR (for scratch sensitive materials). Over the years we've had many challenges that we've been able to solve with Okarrolls. Our staff knows Okarrolls very well and know when and how to utilise them in different client projects. Okarrolls are high quality, the delivery times are short, there are always many material options which enables us to be able to use the rolls in many different industrial applications.

We recommend Okarrolls for manufacturing industry, warehouses, assembly and packaging lines.

-MIKKO HAKALA, SALES DIRECTOR PUTKIAIVOT OY

Kaukora Oy is HVAC industry's leading device manufacturer in Finland. Jäspi and Jämä brands have been produced over 60 years and close to 2 million heating devices.

We were looking for a durable multidirectional roll that doesn't damage the products. Okarrolls do just that. They help us easily move products on a level to different directions.

We use MTR 80 mm Duplex U-profile, spacing: 100 mm in our conveyor line. In some of the products the packaging itself distributes the weight without breaking the packaging. In our other lines the products need to avoid ferritic touch because of corrosion danger.

The best thing about Okarrolls is their durability and the ease of maintenance. I see no problems to install these rollers almost anywhere in conglomerate companies.

-PENTTI TURUNEN, HEAD OF MANUFACTURING, KAUKORA OY
